Dual Studies Bachelor of Engineering (m/f/d)

Description

In cooperation with both the Chamber of Commerce and the University of Applied Sciences in Koblenz we offer a four-and-a-half-year dual studies course at the end of which a BACHELOR OF ENGINEERING (BA) is achieved.

Effective 1 August, we annually look for motivated A-Levels graduates (m/f/d), whose strengths are in the mathematical and technical fields and who have a good knowledge of English.

We are pleased that all vacancies for 2019 could be successful filled and look forward to receiving your applications for a **start on 01 August 2022**.

Combination of theory and practical experience

It's a combination of a draftsman's apprenticeship (m/f/d) and an academic curriculum in the study field of civil engineering.

The first year of training takes place at our company head offices with accompanying vocational school in Koblenz. We familiarize you with the subject matter and teach you 2D and 3D Auto-CAD drafting. After the first year, the 3 ½-year long academic study course at the University of Applied Sciences start. In-house practical work experience accompanies the academic curriculum. If you like, we can offer you practical work experience at our construction sites in Great Britain. At the end of your dual studies, you are welcome to join our company.
